Wiring Diagram

Polypipe

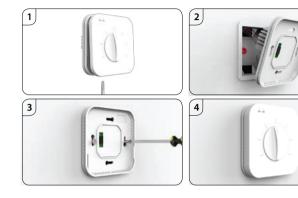

Model : UFHDIALW Input : 85-230V~ 50/60HZ Output: 230VAC 3A MAX

IP Rating : IP20 Operating Temp : 0 - 35 °C

IN ORDER TO AVOID ANY RISK OF ELECTRIC SHOCK, TURN OFF THE POWER TO THE HEATING SYSTEM BEFORE COMMENCING INSTALLATION.

- 1. Using a small screwdriver, slightly loosen the screw from the bottom face of
- the thermostat. You can then carefully separate the front half from the back plate.
- 2. Terminate the thermostat as shown in the wiring diagram.
- 3. Screw the back plate securely back onto the wall.
- 4. Clip the front of the thermostat onto the back plate, securing it in place with the retaining screw.

🔅 Setting The Temperature

To change the set point, rotate the dial until it points to the desired temperature.

Placing the thermostat switch into position 0 will turn OFF the heating completely.

1 Constant Mode

The time clock can be bypassed by placing the switch into position 1. In this position, the thermostat will ignore the time clock input and will continuously control to the set temperature. This feature can be used to extend the heating period without the need to adjust the time clock program.

Set-back Operation

The UFHDIALW offers a set-back function that automatically reduces the set temperature by 4°C.

To make use of the set-back function, a 230v time clock is also required on the system. Place the thermostat slide switch into the time clock position......

When the thermostat receives a 230v signal from the time clock it will control the temperature according to the dial setting.

When no 230v signal is received from the time clock, the thermostat will operate in set back mode and automatically reducing the set temperature by 4°C

Right LED

The right LED is the power LED. It is a two colour LED and is used to indicate the time clock / set-back status.

Left LED

The left LED indicates the heating status. It illuminates when the thermostat is calling for heat.
